## Event Introduction Smart City Futures

Prof. James Powell OBE

*Pro-Vice-Chancellor for  
Enterprise and Regional  
Affairs*

*The University of Salford, UK*

EU COMMISSION  
AGIS 2006

**DESIGN AGAINST CRIME**

# The pathway to a 'Smarter City Future'

*Smart City Futures:*

Creating Space for Innovation and Sustainability  
with Business and the Community

The City Universities of Manchester are leading a collaborative network of those in the region actively engaged with business & the community who want to deliver improved roles for universities in their city regions for the 21st Century, this network is called 'Smart City Futures'

Along with Salford, Manchester Metropolitan and Manchester University, the network includes Manchester Knowledge Capital, and Manchester Enterprise

# The pathway to a 'Smarter City Future'

*Smart City Futures:*

Creating Space for Innovation and Sustainability  
with Business and the Community

- Over the next year 'Smart City Futures' will develop a series of 'knowledge sharing events'
- There will be workshops, focus groups, plays, videos and seminars
- To showcase and demonstrate working practices which have, either paved the way for sustainable decisions to be made, or because they made vital and tangible contributions to city-regional life

# The pathway to a 'Smarter City Future'

Smart City Futures:

Creating Space for Innovation and Sustainability  
with Business and the Community

These events will culminate in a major international conference in July 2009 showcasing working practices which have enabled:

- **policy leaders** develop more successful & sustainable strategies & infrastructure
- **professionals** in all forms of practice to design more humanely responsive solutions
- **citizens** to become empowered to work in socially responsive ways.

# 'Smarter City Future' and 'Secure Fit'

## Smart City Futures:

Creating Space for Innovation and Sustainability  
with Business and the Community

These conference today is part of the  
Portfolio of events being developed  
by the 3 Contact Universities of  
Greater Manchester

We believe Salford University's Design  
against Crime Solution Centre shares its  
knowledge virtuously and co-creates  
solutions with its partners to make a real  
difference for our city region  
Three factors | successful future  
developments

- The value of design
- The strengths and weaknesses  
of technology
- The importance of community  
engagement

Smart City Future's focus on the empowerment of  
professionals, policy leaders and citizens reflects  
these critical issues

# 'Smarter City Future' the next steps
